

Don't Fiddle With It

When we discovered that magic could be expressed via math, we realized very quickly that spells could be comprehensively described using algebra and calculus. From there putting the spells *themselves* on spreadsheets naturally followed.

How? I don't have the faintest idea. It's just like everything else on a spreadsheet, isn't it? I put in the values, and magic comes out somewhere else. I don't need to know anything else.

And that is why it is obviously not my fault that my laptop is now expelling pixies every five seconds. I didn't touch any of the formulas! I swear... oops, sorry.
