

# They Get Dental, Too

Numbers are magical, so organized numbers must be organized *magic*. That's the argument that's led many young wizards into the exciting world of bookkeeping, which they soon discover to be a trap. A subtly dangerous one.

You *can* create a working magical theory out of accountancy; it's just a very *boring* one. It excels in extremely low-powered probability alteration, which maxes out at the level of 'you'll never get your mundane calculations wrong.' Mages have tried to get better results for decades. All failed.

They still stay on the job, though. Being able to keep impeccable books pays *extremely* well.
