

# We Don't Talk About The Face

We don't talk about **The Face**. I mean, historians have put together a good story. *Large language models were pretty primitive back then, they explain. They ended up having systemic informational contamination on a tangled level. That's why **The Face** started showing up in their 'AI' 'prompts.'* Once it got into their collation matrix, there was no way they could purge it. *It's not something we have to worry about.*

No, it's not, because we stopped using large language models. Sure, nobody ever proved **The Face** was dangerous. But by the end, it was in every picture.

Every. Single. One.
